

THREE IMPLANTS
TWO CONNECTIONS
ONE SOURCE

SpiralTech implants all feature a proven SL or RBM surface. Applied in a controlled environment, the RBM process uniformly micro-roughens the implant to maximize surface area bone cell growth and adhesion.

Filler layers that could later form debris or compromise healing are omitted.

ENGINEERED BY
DENTISTS - FOR DENTISTS

PREMIUM

ESi

ULTIMATE

PASSIVE

Premium implant is a dependable, conventionally designed implant. While it can be used in all clinical situations, its conservative threads are best suited for healed ridges with or without previous grafting. It is excellent for working in Type I & II bone.

The Innovative design of the ESi implant is doctor friendly, efficient and revolutionary. Designed to ease your implant placement, self-tapping threads allow for repositioning to the desired location. The ESi is great for beginning and experienced surgeons alike.

AGGRESSIVE

The Ultimate implant is designed for high initial stability—even in soft bone. It is an excellent implant for immediate placement and/or immediate loading. Due to its innovative design, the Ultimate can be redirected during placement to the ideal position.
